Product Description

Boxer 385D Mini Skid Steer

The small but powerful Boxer 385D can handle “big machine” tasks while providing ease of access due to the smaller footprint. Able to handle a full complement of attachments, the diesel-powered 385D allows you to minimize hand labor, reduce overhead and increase productivity. At 35" (889 mm) wide, the unit can fit through a standard gate. The two-pump, 2,800 psi (193 bar) hydraulic operating system develops optimum hydraulic flow to run the machine’s auxiliary and propulsion systems, providing enough power to handle full-size attachments. A dedicated oil cooler to better manage hydraulic heat generation. With a universal compact utility loader mounting plate and quick-attach system, you can quickly and easily switch between any standard attachments.
