Product Description

GiANT Loaders - G2300 Compact Wheel Loader

The GiANT G2300 HD compact articulating loader is the newest of the GiANT lineup! By combining the compact frame of our G2200 and the strong driveline from the G2500 HD, the G2300 HD is the definition of big performance in a small package! Powered by a Kubota 4-cylinder diesel with 26 HP, this machine is not required to run a diesel oxidation catalyst (DOC) or diesel particulate filter (DPF). The G2300 HD is available in 2 boom configurations, X-Tra and Z-Bar, both fitted with a universal skid steer quick attach plate (SSQA). Similar to the G2500 HD, the G2300 HD comes standard with a 2-speed gearbox, 8-ton axles and planetary final drives, capable of a 12.5 mph top speed. Available with open ROPS, deluxe ROPS or optional full cab with heat, this machine fits well in all climate conditions. The G2300 HD frame is compact but still has room for an oscillation joint, helping to improve ride quality and limit ground pressure. A few options include: different tire profiles for various terrains, road lights for safe road travel, rear hydraulic outlets, pro-inching and boom suspension. The G2300 HD is compact, powerful, efficient and fits perfectly in all industries including; agriculture, construction, snow removal, municipal use, landscaping and tree care.
