Product Description

McCormick X4T.100F Crawler Tractor 100 HP

The McCormick X4T.100F is a 100 HP 4-cylinder crawler tractor from the CP05 X4T series. The McCormick CP05 X4T crawler tractor is designed for demanding terrain where wheeled tractors lose traction or cause excessive soil compaction. Stage V compliant through a passive DPF regeneration system, the X4T combines a Deutz four-cylinder engine with hydrostatic drive for precise speed control on slopes and in specialized crop environments.

The McCormick X4T.100F in Detail

At 100 engine horsepower, the X4T.100F delivers the right balance of power and maneuverability for the tasks it was designed to handle. The 4-cylinder engine produces strong torque from low rpm, maintaining consistent forward progress even when implement loads vary across changing ground conditions. The Hydrostatic transmission provides smooth, predictable power delivery and reduces operator fatigue during repetitive operations. Four-wheel drive engages reliably when traction is needed and disengages smoothly on less demanding terrain.

The hydraulic system on the X4T.100F is sized to match the demands of the implements that a 100 HP tractor will typically operate. Flow rates are sufficient for responsive control of mounted and semi-mounted implements, and the load-sensing design ensures that hydraulic power is directed where it is needed without unnecessary energy consumption. The three-point hitch provides ample lift capacity for rear-mounted implements, and the independent PTO allows implement drive to continue independently of the transmission during headland turns.

Features

- Deutz four-cylinder engine, Stage V compliant with passive DPF regeneration
- DOC oxidation catalyser plus SCR system with 10.5L AdBlue tank on higher-power models
- Hydrostatic drive for infinitely variable ground speed control
- Crawler track undercarriage for maximum traction and minimum ground compaction
- Rubber or steel track options to suit different terrain types
- Triple hydraulic pump supplying 56 + 28 L/min to rear hitch and up to five remote valves
- 85-litre fuel tank for extended working days without refueling
- X4T F and X4T M variants for row-crop and hillside applications respectively

Performance and Reliability

McCormick has engineered the CP05 X4T series with a focus on long-term reliability and low cost of ownership. The X4T.100F benefits from extended service intervals, straightforward maintenance access, and a robust parts and dealer network. All service points are accessible without specialist tools, and the engine compartment provides clear access to oils, coolant, and filter elements that require regular attention. The drivetrain is built to the same standards used across the McCormick range, using proven components that have demonstrated durability across a wide range of operating conditions worldwide.

The operator environment in the X4T.100F is designed around the reality of a full working day in the field. Controls are positioned to minimize reach and fatigue, and the instrument layout provides clear information about key machine parameters without distraction. Whether operating from an enclosed cab with full climate control or an open platform, the operator has everything needed to work productively and safely across a long shift.

Applications

- Wet and heavy soils where wheeled tractors lose traction or cause rutting
- Sloped terrain where stability and low center of gravity are essential
- Hillside cultivation and terraced land management
- Precision tillage where minimal soil compaction is a priority
- Row-crop and orchard work on challenging ground conditions

The McCormick X4T.100F at 100 HP is a well-specified, dependable machine for anyone who needs genuine agricultural performance without over-engineering or unnecessary complexity. Contact your local McCormick dealer to arrange a demonstration and discuss how the X4T.100F fits your operation.
