Product Description

McCormick X5.120 Utility Tractor 114 HP

The McCormick X5.120 is a 114 HP 4-cylinder utility tractor from the RS2B X5 series. The McCormick RS2B X5 series occupies the productive middle ground between compact utility and high-power field tractors. Powered by a four-cylinder FPT engine and available with the P3-Drive powershift or electro-hydraulic shuttle, the X5 handles tillage, baling, loader work, and transport with equal capability.

The McCormick X5.120 in Detail

At 114 engine horsepower, the X5.120 delivers the right balance of power and maneuverability for the tasks it was designed to handle. The 4-cylinder engine produces strong torque from low rpm, maintaining consistent forward progress even when implement loads vary across changing ground conditions. The Electro-Hydraulic Shuttle transmission provides smooth, predictable power delivery and reduces operator fatigue during repetitive operations. Four-wheel drive engages reliably when traction is needed and disengages smoothly on less demanding terrain.

The hydraulic system on the X5.120 is sized to match the demands of the implements that a 114 HP tractor will typically operate. Flow rates are sufficient for responsive control of mounted and semi-mounted implements, and the load-sensing design ensures that hydraulic power is directed where it is needed without unnecessary energy consumption. The three-point hitch provides ample lift capacity for rear-mounted implements, and the independent PTO allows implement drive to continue independently of the transmission during headland turns.

Features

- FPT four-cylinder 3.6L engine, Stage V compliant
- P3-Drive three-range powershift or electro-hydraulic shuttle transmission
- Mechanical four-wheel drive with automatic engagement
- High-flow load-sensing hydraulic system with up to four spool valves
- Independent PTO at 540, 540E economy, and 1000 rpm
- Electronic draft and position control for consistent tillage depth
- Spacious cab with intuitive ergonomic control layout and climate control
- Loader-ready with factory provisions for quick-attach front loader systems

Performance and Reliability

McCormick has engineered the RS2B X5 series with a focus on long-term reliability and low cost of ownership. The X5.120 benefits from extended service intervals, straightforward maintenance access, and a robust parts and dealer network. All service points are accessible without specialist tools, and the engine compartment provides clear access to oils, coolant, and filter elements that require regular attention. The drivetrain is built to the same standards used across the McCormick range, using proven components that have demonstrated durability across a wide range of operating conditions worldwide.

The operator environment in the X5.120 is designed around the reality of a full working day in the field. Controls are positioned to minimize reach and fatigue, and the instrument layout provides clear information about key machine parameters without distraction. Whether operating from an enclosed cab with full climate control or an open platform, the operator has everything needed to work productively and safely across a long shift.

Applications

- Mixed farms requiring a capable all-purpose tractor in the 95 to 114 HP range
- Arable operations combining tillage, seeding, and harvest support
- Livestock farms needing reliable loader performance alongside forage work
- Agricultural contractors needing a productive, fuel-efficient mid-range machine
- Farms where the P3-Drive powershift reduces operator fatigue during long shifts

The McCormick X5.120 at 114 HP is a well-specified, dependable machine for anyone who needs genuine agricultural performance without over-engineering or unnecessary complexity. Contact your local McCormick dealer to arrange a demonstration and discuss how the X5.120 fits your operation.
