Product Description

RD18-100C Ride On Tandem Roller

The RD18 articulated ride-on rollers offer a large drum diameter combined with the low machine center of gravity to ensure excellent compaction quality. The three-point articulated joint offers constant surface contact for better results, safety, and a smoother ride. Unilateral drum support allows for up to the edge compaction on both sides.

RD18-100C - Combination roller with vibration drum in front, pneumatic tires in rear, weight class of 1.8 tons, drum width of 39.4-inches (100 cm)

Features:

- Dual drum vibration with high and low settings
 - Maneuverable compact roller for superior compaction for a variety of applications
 - Tapered design allows for excellent drum visibility
 - Three-point articulated pendulum joint ensures uniform weight distribution for excellent compaction results, maneuverability, and stability
 - Available as a dual drum roller or a combination roller with front drum vibration and rear pneumatic tires
-
