Product Description

RD45-140C Ride On Tandem Roller

The RD45 articulated tandem-axle rollers offer high centrifugal forces to provide full compaction and quality results. Configurations for these versatile rollers include traditional dual vibrating drums, tandem roller with an oscillating drum or as a combination version. All models feature an ergonomic operator's platform with reduced vibration and articulated joints to provide for maximum driving comfort. The tapered design provides an excellent view of the drums and work site.

RD45-140C - Combination roller with vibrating drum in front, pneumatic tires in rear, weight class 4.5 tons, drum width of 54.3 inches.

Features:

- Drum offset allows for easy maneuvering when compacting along walls and provides a smooth finish
 - Three point articulated pendulum joint offers constant contact for better results, safety and a smoother ride
 - Large fuel and water tanks allow for extended operation time. Central drainage allows water to be drained in one simple step
 - Vibration and oscillation can be adjusted in two levels
 - ROPS (Roll Over Protective Structure) can be folded back for transport
-
