Product Description

Bearcat CH8540 9-inch PTO Chipper

MAINTAIN POWER. REDUCE MAINTENANCE.

Using a Crary® Bear Cat® PTO machine reduces engine maintenance, giving you more uptime to work. With a wide selection of PTO machines ready to go to work for you, it's time to match your tractor with a Crary Bear Cat PTO Chipper and Chipper/Shredder.

Power take off on utility tractors have become a primary source for much of the workaround farms, orchards, golf courses, etc. Any place where you need to turn a pile of branches into a pile of chips.

You choose - self feed or hydrostatic hydraulic feed for infinite feed settings - these chippers mount on your three-point hitch and hook directly to the PTO for quick setup and power on demand.

The CH8540 boasts a 9-inch maximum capacity and infeed opening. Rotating 360 degrees, the 8-inch round discharge chute gives you accurate control over the flow of chips produced. The 30" x 1.25" thick, 275-pound dynamically-balanced disc, adjustable 4-sided anvil, four reversible chipper blades. Plate steel construction means solid performance for hundreds of hours, and maintenance is enhanced by a hinged disc cover that provides wide-open access to the chipper blades and disc.

Also available as CH8540XT.

NOTE - For Use On Tractors with PTO Horsepower Ratings From 35 hp to 60 hp
